

PRODUCT INFORMATION

USE THE CLEAN SWEEP ACCESSORY ON YOUR FARR GOLD SERIES UNIT TO REMOVE FUGITIVE DUST FROM AROUND THE DUST COLLECTOR OR WORK AREA AND SEND IT TO THE DUST COLLECTOR.

The Clean Sweep accessory for the Farr Gold Series is a vacuum hose system which uses a pneumatic vacuum pump to draw the dust into the dust collector after maintenance or cleaning.

The pump is powered by the same compressed air line which cleans the dust collector filters. The vacuum pump has venturi nozzles, which creates a vacuum of up to 40" w.g. when the compressed air is applied.

The dust is drawn into the inlet of the dust collector before the channel baffles so that large objects will not contact the filter media. A shut-off valve is mounted in the hose so that the Clean Sweep system is isolated from the dust collector when not in operation.

A shut-off valve is also mounted to the vacuum pump so that the compressed air is only used when the system is in operation. The system includes a floor sweep and crevice nozzle.

A Venturi Vacuum Pump shut off valve and hose comprise the Clean Sweep system.

Clean Sweep

FARR GOLD SERIES® ACCESSORY

OPERATION

Compressed air is fed into an exterior annular ring that has a number of orifices leading into the main tube of a transducer. As the compressed air exits from the orifices, its velocity increases to supersonic speed. The air forced into the center of the tube rotates with a twisting motion similar to a worm screw. This cyclonic flow creates a powerful vacuum capable of drawing materials into and through the transducer. As a vacuum source, the Clean Sweep is capable of rapid evacuation of a large volume of air to a low vacuum level.

NOTE

Minimum Field Requirements: 90 psig air supply, 3/8" NPT connection.

CONTENTS OF PNEUMATIC VACUUM SYSTEM KIT

- Pneumatic vacuum pump – uses 55cfm of 90psig compressed air when running
- Hose hanger
- 25 ft. flexible hose
- 12 ft. flexible hose (between hose hanger and inlet, cut length to fit)
- Vacuum hose shut-off valve
- Compressed air shut-off valve
- Aluminum floor sweep
- Crevice nozzle
- Inlet flange with hose connection
- Includes all required hardware

FEATURES

- 40" water gauge (w.g.) vacuum @ 90 psig compressed air
- Powered by existing air supply, no extra electrical required
- Easy installation
- Can be installed on any dust collector
- Maintenance free
- Includes 25 ft. long flexible hose plus floor sweep and crevice nozzle
